**DETAILED ACTION**

***Drawings***

1. The drawings were received on March 9, 2009. These drawings are not approved. The drawing provides details not disclosed as originally filed.

***Claim Rejections - 35 USC § 112***

2. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

3. Claim 13 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 13 is indefinite because it is unclear how to interpret the limitation the resilient securement. Are you claiming that the teeth are made of elastomer or rubber?

***Claim Rejections - 35 USC § 103***

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claims 1, 2, 4, 8, 11-14, 38, 45, and 46 are rejected under 35 U.S.C. 103(a) as being unpatentable over Morris (US 2,424,492) in view of Franksson (US 6,772,653).

Morris discloses an electromotive linear drive, comprising: a housing (11, 13, 43), a d.c. motor (10) received in the housing for operating a lifting tube which is operatively

connected to the component, at least one motor casing disposed in surrounding relationship to the d.c. motor and having, and at least one attachment element extending at a substantially right angle in relation to the motor casing and having

Morris does not disclose an internal thread for threaded engagement to the housing at a first cylindrical connection zone, and an external thread for threaded engagement to the housing at a second cylindrical connection zone.

Franksson teaches the use of using internal and external threads to connect the housing and the attachment element.

It would have been obvious to one having ordinary skill in the art at the time the invention was made to modify the device of Morris to include internal and external threads to connect the housing and the attachment element, as taught by Franksson in order to reduce the number of parts.

***Claim Rejections - 35 USC § 103***

6. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

7. Claims 15 and 16 are rejected under 35 U.S.C. 103(a) as being unpatentable over Morris (US 2,424,492) and Franksson (US 6,772,653) in view of Mounier (FR 2632460).

Morris discloses a device as described above, but does not disclose the plug of the power feed cable for insertion in the socket receptacle is secured by a securing element.

Mounier teaches the use of a plug (15) of a power feed cable for insertion in a socket receptacle is secured by a securing element (14).

It would have been obvious to one having ordinary skill in the art at the time the invention was made to modify the device of Morris to include a securing element as taught by Mounier in order to facilitate assembly.

Re claim 16, Mounier shows the securing element (14) is a cover cap placed from outside upon the plug and secured by resilient locking tongues.

### ***Response to Arguments***

8. Applicant's arguments with respect to the claims have been considered but are moot in view of the new ground(s) of rejection.

### ***Conclusion***

9. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
